

Want to attend but you do not know how to convince your boss? Copy this text below and email it to your boss:

**Dear Sir/Madam,**

There's a really interesting Globally Recognised Web Development Course coming up really soon (<https://odurinde.com/web-development/>).

I really think it makes sense for me to attend.

Here's why: First off, the course is designed to help us build better websites, improve our technical capabilities, and save time and money by equipping us with practical web development skills that actually work.

Secondly, it is very easy to lose a lot of money as well as waste a lot of time doing the wrong thing when building or managing web platforms (Plus we can lose out on opportunities due to inefficient websites or technical issues)...

Thirdly, even if we plan to outsource web development, it's still crucial that we understand how modern websites are built and function.

Without this understanding, we risk overspending or not getting value for money from developers or agencies paying for work we can't properly evaluate or apply.

The facilitator is a hands-on practitioner, an active developer in the tech industry, which means I will learn up-to-date skills directly from someone who knows what they're doing.

They also have proof on their website (<https://odurinde.com/testimonials/>) that they practice what they teach and deliver results. The success stories from past students are really inspiring.

Also, the facilitator has experience handling real-world development challenges for clients across different industries and locations.

I can learn how the best developers build functional, modern, and scalable web applications.

I believe the course will save us a tremendous amount of trial and error, time, and technical setbacks.

The content is 100% practical – something I can begin applying right away.

**Here's what I'll learn:**

Introduction to Web Development

Introduction to Version Control (Git and GitHub)

HTML Foundations

CSS Basics

Responsive Web Design

JavaScript Fundamentals

DOM Manipulation

Backend Development Basics

Advanced JavaScript Concepts

These are industry-relevant skills, and by the end of the course, I'll be able to contribute to building and maintaining high-quality web solutions for our company.

The only issue is that they only take 10 people, and the class is almost FULL. If we delay, we might miss this chance. I'm not sure when next they'll run another Web Development Course.

They get 85% of their new students through referrals from people who've attended the course, a strong signal that it delivers real value.

They've also trained professionals from top companies like UAC Plc, Heir Holdings, Spectranet, Prima Garnet Africa, Jide Taiwo and Co., PropertyMart, Livewell Initiative, Multishield, and others.

This would also be a great networking opportunity for me to learn and grow professionally.

To sum it up, I will learn real development skills that I can use immediately to improve our team's technical execution. It will help us reduce delays, lower long-term development costs, and build better products faster.

But you don't have to take my word for it... You can read more about the training here – <https://odurinde.com/web-development/>

Thank you.
